

Pablo Vahanian

EDUCATION

Iowa State University, Ames, Iowa December 2013
Bachelor of Science in Finance and Spanish

Lambda Coding Boot Camp, San Francisco, California December 2020
Full Stack Web Program

SKILLS & ABILITIES

JavaScript, React, HTML/CSS
VSCode, Git, Firebase, Node.js,
Material-Ui, FIGMA, Gimp

Bilingual (Spanish native speaker)
Google Suite Microsoft Suite Excel
Slack, Discord, Trello

PROJECTS

Clutch App December 2020 - Current, [Link](#)

- Used technologies, **React, Firebase, Material-Ui, Redux**
- Project is a social media highlight app for athletes. Videos are tagged with corresponding actions like goals, assists, blocks for sorting.
- This is an ongoing project with multiple user types and machine learning to be implemented in the future for tagging purposes.

Slacker App November 2020, [Link](#)

- Used technologies, **Figma, React, Firebase, Material-Ui, Context Api**
- Prototyped with the intention of it being a realtime chat app with github or email login.
- Project was completed in a week with MVP met on the 5th day and styling for the remaining two days.
- Some of the issues were the problems I found when learning a noSQL style database. It was difficult but very fun to see another approach at how to manage data. I had no previous experience with Firebase/Firestore but found it really effective for our project.

211 App February-July 2020, [Link](#)

- Used technologies, **Figma, React, Firebase, Material-Ui**
- Prototyped in a effort to improve the UX experience with trauma informed design
- The project was a collaboration of over 20 college engineers. I learned to work as a contributing team member to different components throughout the project. While also understanding that some ideas and code would be ultimately scrapped. This really helped me grow as a team player.
- I focused on the UX design and user location component with Google API
